SKILLS

TESTING SKILLS

- Test Case Design and Execution (Functional, Regression, Re-test).
- Bug Reporting and Tracking (Jira, Trello).
- API Testing (Swagger, Postman)
- Manual Testing for Web Applications (UI/UX, Usability, Cross-browser).
- Basic Automation Knowledge: Java + JUnit (Unit Test).
- Understanding of Defect Severity & Priority, SDLC, STLC.

TECHNICAL SKILLS

- Programming Language: Java OOP.
- Framework/Platforms: .ReactJS, Bootstrap, Angular.
- Web Development: HTML/CSS, JavaScript, ReactJS.
- Database: MS SQL Server.
- Others: Git, Vercel, Figma, Flutter.

OBJECTIVE

I have a background in software development, which helps me understand system logic and identify defects more effectively. I am now pursuing a Fresher Manual Tester role to focus on software quality, user experience, and defect prevention, with a long-term goal of becoming a QA professional.

UNIVERSITY PROJECT

January 2025 - May 2025

BFarmX: Blockchain integration in clean agricultural production - Capstone Project

- Description:** Developed a digital traceability platform aligned with VietGAP standards to manage and record short-cycle crop production processes, including cultivation, harvesting, and post-harvest handling. Integrates third-party inspection results to enhance data transparency, quality control, and compliance in agricultural supply chains.
- Technologies:**
 - Front-end: ReactJS, React Native.
 - Back-end: C#, ASP.NET Core Web API, Entity Framework.
 - CI/CD: Jenkins, GitHub Actions.
 - Blockchain: VeChain.
 - Database: SQL Server, Redis, Firebase.
 - Media Storage: Cloudinary.
 - Deployment: Google Cloud (VPS), Netlify.
 - Tools: GitHub, Jira, Swagger, Figma.
- Testing Documents**
 - Participated in creating SRS and test scenarios.
 - Designed and executed Manual Test Cases.
 - Conducted API Testing with Swagger and Postman.
- Role/Main task:** Manual Tester, Front-end Developer, Project Document Contributor.
- Responsibilities**
 - Test Case Design: Designed and documented comprehensive manual test cases for crop cultivation, harvesting, and blockchain data integration modules.
 - Functional Testing: Executed manual tests across Web (ReactJS) to verify data transparency and compliance with VietGAP standards.

SOFT SKILLS

- Attention to detail.
- Analytical thinking.
- Clear communication.
- Team collaboration.
- Time management.
- Willingness to learn.

CERTIFICATE

COURSERA

- Managing Project Risks and Changes:
[View Certificate](#)
- Project Management Project: [View Certificate](#)
- Understanding User Needs: [View Certificate](#)
- Academic English: Writing: [View Certificate](#)

EDUCATION

2021 - 2025

FPT University

- Software Engineering
- GPA 7.25/10.
- English: IELTS 6.0

- Requirements Analysis: Participated in analyzing and refining Software Requirement Specifications (SRS) to ensure a deep understanding of agricultural traceability workflows.
- API Testing: Conducted thorough API testing using Postman and Swagger to validate backend responses and data integrity.
- Team size: 5

September 2023 - December 2023

FService: Student House Subscription Service

- **Description:**Fservice is a platform that allows residents of Vinhomes Grand Park (Thu Duc) to purchase pre-designed apartment services and make online payments through the integrated VNPAY on the website.
- **Technologies:**
 - Front-end: ReactJS, ViteJS.
 - Back-end: ASP.NET Core Web API, MS SQL, Azure SQL.
 - Deployment: Azure App Service (Back-end), Vercel (Front-end).
 - Other: GitHub, Jira, Figma, Swagger, JWT Token.
- **Role/Main task:** Front-end Developer, Design Web UI.
- **Responsibilities**
 - UI/UX Testing: Validated the front-end implementation against Figma designs to ensure visual consistency and a seamless user experience for residents.
 - Integration Testing: Performed end-to-end testing for the VNPAY payment gateway integration to ensure secure and accurate transaction processing.
 - Compatibility Testing: Verified the platform's responsiveness and functionality across multiple browsers (Chrome, Safari, Edge) using ViteJS and ReactJS.
 - Regression Testing: Conducted manual regression testing after UI updates to ensure existing subscription features remained functional.

- Team size: 4

September 2023 - November 2023

Utility Project: Math Utility Library

- **Description:**A personal project with Maven, Designed and executed a Maven Math Utility project with JUnit testing, GitHub Actions for Continuous Integration, and Data- Driven and Regression Testing to optimize coding process.
- **Technologies:** Java, Maven, JUnit, GitHub, GitHub Actions, CI/CD, Data driven testing,Regression tesing.
- **Role/Main task:** Tester.

- **Responsibilities**

- Unit Testing: Developed and executed unit tests using the JUnit framework to ensure the mathematical accuracy of library functions.
- Data-Driven Testing: Applied data-driven testing techniques to validate library performance against various boundary values and edge cases.
- Test Documentation: Documented test scenarios and results to maintain high code quality standards for a personal Maven project.

- **Team size:**1

WORK EXPERIENCE

January 2024 - April 2024

FPT Software - OJT Program

- **Role/Main task:** Manual Tester, Front-end Developer.

- **Responsibilities**

- Test Case Development: Designed, maintained, and executed detailed manual test cases, including functional, integration, and UI/UX testing.
- Defect Management: Identified, recorded, and tracked software defects using Jira, providing clear reproduction steps and screenshots to assist the development team.
- API Testing: Performed backend API validation using Postman and Swagger to verify status codes, response times, and data accuracy.
- Collaboration: Worked closely with cross-functional teams in an Agile environment to ensure project timelines and quality standards were met.
- Regression Testing: Conducted regression tests after bug fixes or feature updates to ensure system stability and prevent new issues.
